

# EnerVivo

## Photovoltaic Engineering Experts

Leading solar project study office since 2017. Based in France with international service. We provide end-to-end photovoltaic consulting for professionals and institutions seeking sustainable energy solutions.

### Achieve substantial savings

**30% to 75%**  
reduction on your electricity bill

**10% IRR** (Internal Rate of Return)  
for solarization projects

**7 years**  
average payback time for  
solarization investments

### Self-Consumption Solutions Design

#### Design

Custom sizing for optimal on-site electricity generation.

#### Optimize

Maximize self-consumption to minimize grid dependency.

#### Analyze

Calculate return on investment across all project types.

# Our core services

## Layout Plans

Optimized panel placement designs for maximum efficiency and aesthetics.

## Electrical Diagrams

Comprehensive single-line schematics meeting all regulatory standards.

## Production Forecasting

Detailed analysis of expected energy yield and financial returns.

## Feasibility Studies

Thorough assessment of technical and economic viability.

# Integration & Permitting Support

## Site Integration Plans

Tailored designs that respect architectural integrity and landscape.

## Permitting Preparation

Comprehensive documentation for urban and rural approvals.

## Regulatory Navigation

Expert guidance through complex local and national requirements.

# Project Development Phases

## Preliminary Design

Initial concept and feasibility assessment

## Detailed Design

Complete technical specifications and planning

## Stakeholder Collaboration

Inclusive process ensuring all requirements are met

# Owner's representative : From vision to delivery

## Client Consultation

Understanding your energy goals and requirements

## Project Delivery

Successful handover and performances verification

## Project Coordination

Seamless management between all parties

## Quality Assurance

Rigorous oversight from design to final installation

# Client success stories

"EnerVivo achieved a photovoltaic self-production rate of 40% for our methanisation unit in Gironde."

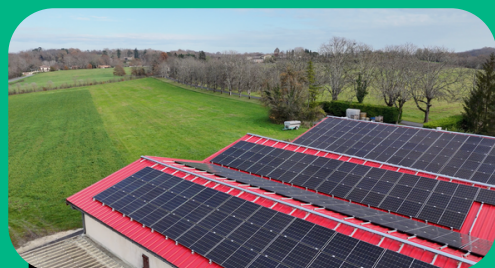

Comprehensive energy concept for a farm-school promoting sustainability education.

"The EnerVivo study eliminated more than 90% of the use of gas and fuel for heating our nursery."

# Reference project : Energy efficiency study

33 Gironde, Located in southwest France

## 90% Reduction

Eliminated gas and fuel usage for nursery heating

## 100% satisfaction

Enhanced comfort and building performance

# Why Choose EnerVivo?

## Excellence

Proven expertise across all project scales

## Knowledge

Comprehensive technical and regulatory mastery

## Commitment

Dedicated to France's clean energy future
